Adding Video in Elgg

At this point using video in Elgg is limited to uploading a video in **Files** and having others download the video for viewing. There is the ability to upload **Youtube** videos and have the controller embedded into Elgg - that is to say you can view them inside of Elgg without having to download them. The down side to this is that Youtube is blocked for students inside of the firewall.

1. Navigate to Youtube, choose which video you would like to upload. Click the **Share** tab underneath the video in Youtube. **Copy** the URL of the video that appears.

2. Go to the **More** tab and choose **Videos** click **Add videos**.

3. On this page give the video a titles, **paste** the URL of the video in the **Enter video URL** box, give it a description, tag it, determine the **Access** privileges and click **Save**.

4. Your saved video will show up now with a controller and options for commenting and *liking*.
