Pages in Elgg

Users can create pages in Elgg in their interface or inside a group. Groups can be edited by other users (much like a wiki) or they can be *read-only*. In either case, other users can still comment on content.

Either go to **More** and **Pages** or the **Group Pages** and click on **Add Pages**. You will be directed to name the page and tag the page, enter content and determine **Read Access** and **Write Access**.

Read access means simply - *Who gets to see this?* If you want everybody to see it choose *logged-in users*, if you want only your friends or members of your group to see it choose another type of access.

Write access means - *Who gets to change the content?* If you keep it private then you are the only one who gets to edit this page.

The editor that comes with Elgg is very simple. It allows you to:

1. Change the text formatting
2. Create Bulleted or Numbered lists
3. Go Backward or Forward
4. Insert or break links
5. Insert images, block quotes, edit HTML, insert text from Plain Text or Word
6. View the web page in full screen as you are editing
